Born in Flames Howard Hampton 2007 Twenty years as an outsider scouring the underbelly of American culture has made Howard Hampton a uniquely hardnosed guide to the heart of pop darkness. Bridging the fatalistic, intensely charged space between Apocalypse Now Redux and Nirvana's Smells Like Teen Spirit, his writing breaks down barriers of ignorance and arrogance that have segregated art forms from each other and often from the world at large. In the freewheeling spirit of Pauline Kael, Lester Bangs, and Manny Farber, Hampton calls up the extremist, underground tendencies and archaic forces simmering beneath the surface of popular forms. Ranging from the kinetic poetry of Hong Kong cinema and the neo-New Wave energy of Irma Vep to the punk heroines of Sleater-Kinney and Ghost World, Born in Flames plays odd couples off one another: pitting Natural Born Killers against Forrest Gump, contrasting Jean-Luc Godard with Steven Spielberg, defending David Lynch against aesthetic ideologues, invoking The Curse of the Mekons against Fredric Jameson's Postmodernism, and introducing D. H. Lawrence to Buffy the Vampire Slayer. We are born in flames, sang the incandescent Lora Logic, and here those flames are a source of illumination as well as destruction, warmth as well as consumption. From the scorched-earth works of action-movie provocateurs Seijun Suzuki and Sam Peckinpah to the cargo cult soundscapes of Pere Ubu and the Czech dissidents Plastic People of the Universe, Born in Flames is a headlong plunge into the passions and disruptive power of art.

The Biological Universe Steven J. Dick 1996-06-13 Throughout the twentieth century, from the furor over Percival Lowell's claim of canals on Mars to the sophisticated Search for Extraterrestrial Intelligence, otherworldly life has often intrigued and occasionally consumed science and the public. The Biological Universe provides a rich and colorful history of the attempts during the twentieth century to answer

questions such as whether "biological law" reigns throughout the universe and whether there are other histories, religions, and philosophies outside those on Earth. Covering a broad range of topics, including the search for life in the solar system, the origins of life, UFOs, and aliens in science fiction, Steven J. Dick shows how the concept of extraterrestrial intelligence is a world view of its own, a "biophysical cosmology" that seeks confirmation no less than physical views of the universe. This book will fascinate astronomers, historians of science, biochemists, and science fiction readers.

It provides clear, simple explanations and concrete examples of complex concepts, making a wide variety of commonly used critical theories accessible to novices without sacrificing any theoretical rigor or thoroughness. This new edition provides in-depth coverage of the most common approaches to literary analysis today: feminism, psychoanalysis, Marxism, reader-response theory, new criticism, structuralism and semiotics, deconstruction, new historicism, cultural criticism, lesbian/gay/queer theory, African American criticism, and postcolonial criticism. The chapters provide an extended explanation of each theory, using examples from everyday life, popular culture, and literary texts; a list of specific questions critics who use that theory ask about literary texts; an interpretation of F. Scott Fitzgerald's *The Great Gatsby* through the lens of each theory; a list of questions for further practice to guide readers in applying each theory to different literary works; and a bibliography of primary and secondary works for further reading.

Outliers Malcolm Gladwell 2008-11-18 From the bestselling author of *Blink* and *The Tipping Point*, Malcolm Gladwell's *Outliers: The Story of Success* overturns conventional wisdom about genius to show us what

makes an ordinary person an extreme overachiever. Why do some people achieve so much more than others? Can they lie so far out of the ordinary? In this provocative and inspiring book, Malcolm Gladwell looks at everyone from rock stars to professional athletes, software billionaires to scientific geniuses, to show that the story of success is far more surprising, and far more fascinating, than we could ever have imagined. He reveals that it's as much about where we're from and what we do, as who we are - and that no one, not even a genius, ever makes it alone. Outliers will change the way you think about your own life story, and about what makes us all unique. 'Gladwell is not only a brilliant storyteller; he can see what those stories tell us, the lessons they contain' Guardian 'Malcolm Gladwell is a global phenomenon ... he has a genius for making everything he writes seem like an impossible adventure' Observer 'He is the best kind of writer - the kind who makes you feel like you're a genius, rather than he's a genius' The Times

The Self-evolving Cosmos Steven M. Rosen 2008 This unique book offers an original way of thinking about two of the most significant problems confronting modern theoretical physics: the unification of the forces of nature and the evolution of the universe. In bringing out the inadequacies of the prevailing approach to these questions, the author demonstrates the need for more than just a new theory. The meanings of space and time themselves must be radically rethought, which requires a whole new philosophical foundation. To this end, the book turns to the phenomenological writings of Maurice Merleau-Ponty and Martin Heidegger. Their insights into space and time bring the natural world to life in a manner well-suited to the dynamic phenomena of contemporary physics. In aligning continental thought with problems in physics and cosmology, the book makes use of topology. Phenomenological intuitions about space and time are systematically fleshed out via an unconventional and innovative approach to this qualitative branch of mathematics. The author's pioneering work in topological phenomenology is applied to such topics as quantum gravity, cosmogony, symmetry, spin, vorticity, dimension theory, Kaluza-Klein and string theories, fermion-boson interrelatedness, hypernumbers, and the mind-matter interface.

James Jones Steven R. Carter 1998 James Jones's spiritual beliefs were central to his great World War II trilogy *From Here to Eternity*, *The Thin Red Line*, and *Whistle*, as well as to the rest of his fiction. In this first book-length exploration of the subject, Steven Carter argues that Jones's ideas about reincarnation, karma, and spiritual evolution were heavily influenced by transcendentalism, theosophy, and Oriental religions. The author places Jones in what he identifies as a tradition of American literary Orientalism that includes Emerson, Thoreau, Kerouac, Ginsberg, and others. Carter bases his argument on extensive research into American literature and criticism coupled with visits and personal correspondence with Jones.

Entertaining Crime Mark Fishman 2018-02-06 In eleven original studies by social scientists, this is the first volume to focus on television reality crime programming as a genre. Contributors address such questions as: why do these programs exist; what larger cultural meaning do they have; what effect do they have on audiences; and what do they indicate about crime and justice in the late twentieth century? Adaptable at both undergraduate and graduate levels, *Entertaining Crime* will contribute to discussions of crime and the media, as well as crime in relation to other issues, such as gender, race/ethnicity, and fear of crime.

Close Encounters? R.J. Lambourne 1990-01-01 Currently, science fiction in all its forms is enjoying enormous popular interest. There can be no doubt that science fiction books and films have great influence on the public view of science and scientists. *Close Encounters?* examines the historical development of science fiction as a genre in books and films, tracing its roots, examining its most common ideas, exploring its relationship to "real" science, and attempting to assess its cultural impact. Discussion focuses on major themes such as time travel, politics, religion, ecology, and disasters. The authors consider the science in science fiction, the images of scientists that science fiction conveys, and some of the political, religious, and social motifs prominent in science fiction. They also discuss pseudo-science and its growing influence on the public perception of science. This fascinating, thought-provoking study should be read by all those interested in how the nature of science and its role in our society is portrayed in science fiction.

Life on Other Worlds Steven J. Dick 1998-09-28 Are we alone in the Universe? From the furor over Percival Lowell's claim of canals on Mars at the beginning of the century to the more recent controversial rock from Mars and the sophisticated Search for Extraterrestrial Intelligence (SETI), the prospect of otherworldly life has often titillated and occasionally consumed science and the public. The search for planetary systems, the quest to explain UFOs, and inquiries into the origin of life have fueled an abundance of popular and scientific literature. They have also provided Hollywood with fodder for some of the most popular films of our time, including *ET*, *Aliens*, *Independence Day*, and *Contact*. Lucid and accessible, *Life on Other Worlds* chronicles the history of the twentieth-century extraterrestrial debate. Putting the latest findings and heated controversies into a broader historical context, Steven Dick documents how the concept of extraterrestrial intelligence is a world view of its own--a "biophysical cosmology" that seeks confirmation no less than physical views of the Universe. The debate rests at the very limits of science, and attempts at confirmation only illuminate the nature of science itself. Dick shows that appreciating the history of the debate enables a better understanding of the nature of science, and is central to any forward-looking view of religion and philosophy. For anyone interested in a look over the edge of scientific discovery, *Life on Other Worlds* provides the exciting tale behind the greatest debate in the twentieth century. Dr. Steven J. Dick is an astronomer and historian of science at the U.S. Naval Observatory. He is the author of *Plurality of Worlds: The Origins of the Extraterrestrial Life Debate from Democritus to Kant* (Cambridge, 1982) and *Biological Universe* (Cambridge, 1996).
